

In Helios 3D Palette text scaling issue

This article describes how to avoid Helios 3D palette display issues as displayed in the two following pictures.

Figure 1: Bottom of input fields cut off

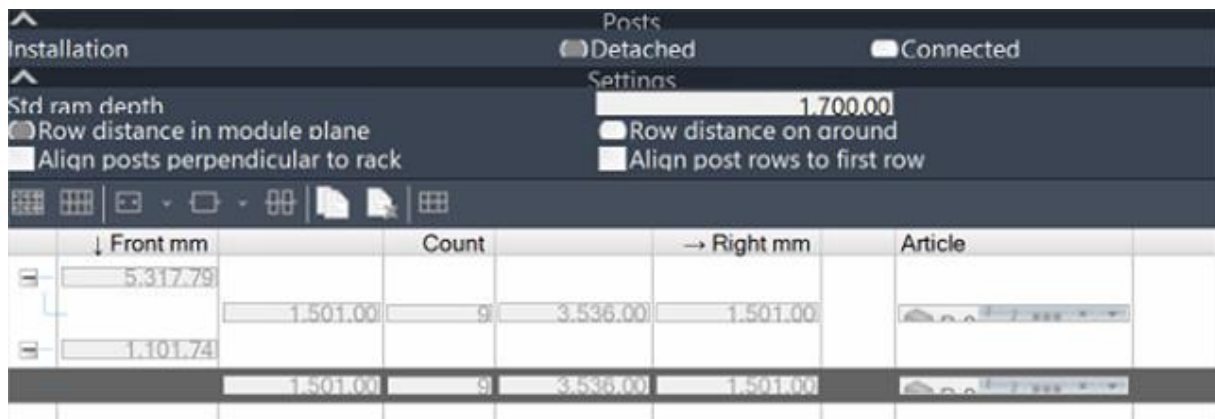

Figure 2: Fields unreadable due to bad field height scaling

The problem is that Civil 3D or AutoCAD interferes with the system text scaling.

The solution is to disable AutoCAD DPI scaling:

1. Right-click the AutoCAD shortcut or the *acad.exe* program file and choose *Properties*.
2. Under the *Compatibility* tab, enable one of these options:
 - Enable *Disable Display Scaling On High DPI*.
 - Click "Change high DPI settings" and then enable *Override high DPI scaling behavior. Scaling performed by: System*.

In the below picture we show the steps and dialogue order in a single picture.
